SUMMARY

Product Designer with ~5 years at Njorda, a Swedish wealth-tech company, owning design end-to-end, and for its US client Vest Financial ($76B+ in assets). Designed B2C and B2B fintech products — from a new portfolio-building tool for advisors to an iOS, Android & web app with an AI assistant — and built design systems with 450+ components. Adaptable generalist across product, web and brand design who picks up new areas fast; now turns designs into interactive prototypes and a live design system with AI.

SKILLS

UX	Client feedback analysis, UX audits (heuristic evaluation), competitive analysis, domain research, user journeys (CJM), user flows, information architecture, wireframing, UX writing (microcopy)
UI	Visual design, design systems, component libraries, design tokens, responsive design (web, iOS, Android), accessibility (WCAG)
Prototyping	Interactive prototypes made with Claude Code (flow options, all screen states), Figma prototyping, Protopie
AI-assisted design	Claude Code (HTML design systems, dev handoff), Gemini (UX copy options, image generation)
Product	Feature definition with stakeholders, design options & trade-offs, feedback-driven iteration, data-informed design, A/B testing, B2B SaaS, fintech / wealth management
Brand & marketing	Brand guidelines, marketing websites, landing pages, presentations, print and social media design
Tools	Figma, FigJam, Miro, Protopie, Adobe Photoshop, Canva, WordPress (content editing)
Collaboration	Design QA / design review, developer handoff, Jira, Notion, distributed teams
Languages (spoken)	English — B2, Polish — B1

EXPERIENCE

Product Designer (UX/UI) — Njorda AB

Jan 2022 – Present

Wealth-tech (Sweden): portfolio infrastructure for wealth managers, financial advisors and private investors · Working with 2 co-founders (product, CTO, sales), 5 developers, 1 QA

- Owned design end-to-end across B2C and B2B products — from client feedback and feature requests to user flows, UI, prototypes and developer handoff.
- Shaped product decisions with the co-founders: prepared several design options per feature and aligned on what to build.
- Built and maintained two design systems in Figma: 100+ components for the B2C app and 350+ for the B2B platform.
- Ran design QA on implemented interfaces: documented discrepancies and fix instructions for developers, keeping production UI consistent with the designs.
- Brought AI into the design workflow in 2026: used Claude Code to turn Figma tokens, components and styles into a live design system and interactive prototypes with several options per flow, presented to product leads.
- Streamlined developer handoff: deliver the design system as an HTML file, all assets and detailed prototypes covering every screen state, making collaboration with developers much smoother.

B2B Advisor Platform — Advisor Portal, Portfolio Fetcher, Portfolio Builder

- Designed Portfolio Builder from scratch (2023): a tool for advisors to build client portfolios, compare them with the current portfolio, review analytics and generate reports; redesigned it in 2026 with new branding and feedback-driven UX.
- Redesigned the Advisor Portal (client database, portfolio statistics and reports) to the new brand guide and iterated on its UX based on client feedback and new feature requests.
- Redesigned Portfolio Fetcher, a client-facing flow to connect banks, review connections, add manual accounts and share data with an advisor for recommendations.

- Translated complex financial data (portfolios, allocations, analytics, reports) into clear interfaces for advisors used to working in Excel, grounding decisions in competitive analysis and domain research.
- Designed the B2B marketing website; the platform is delivered in different configurations to multiple financial advisory clients.

B2C Wealth App — iOS, Android & web

- Refreshed the UI of a personal wealth app on web and mobile (bank and account aggregation, portfolio overview, analytics) to a new brand guide: simplified overloaded screens, unified inconsistent styles and added filtering.
- Redesigned the app in 2025 around an AI assistant, with a new brand, goals, portfolio monitors and simpler analytics for private investors.
- Designed the AI assistant end-to-end: conversational UI, dialogue scenarios, suggested prompts and in-chat portfolio analytics.
- Designed the native iOS & Android app in 2026: a mobile design system and 12 core screens with 78 states, delivered as a clickable prototype.
- Designed several versions of the app's marketing landing page to match each product stage.

Other Njorda work

- Econ, a carbon footprint app based on bank transactions: took over from the previous designers and improved the usability of key views such as budgets and transactions.
- Created brand-consistent templates for documents, presentations and business cards.

Client project: Vest Financial — US asset manager (Target Outcome ETFs, $76B+ in assets)

Since Jan 2022, in parallel with Njorda's products: main designer for Vest's web, brand and marketing, working directly with their team.

- Brought consistency to the existing marketing website — unified conflicting styles, designed new pages, built the website design system — and updated it during the 2025 rebrand.
- Improved the UI and UX of the internal reporting portal.
- Explored brand evolution options (color palette, logo) for leadership review.
- Designed investor and advisor collateral and reusable document templates: fact sheets, white papers, one-pagers, product prospectuses, presentations and email signatures.
- Created marketing and social media visuals: LinkedIn carousels and post covers, blog article images (first designed by hand, now generated with Gemini), conference banners, business cards and merch.

Tools & methods: Figma, FigJam, Claude Code, Protopie, Jira, design system, design tokens, user flows, prototyping, UX audit, competitive analysis, A/B testing, WCAG, design QA, B2B SaaS, fintech, web design, brand identity, marketing collateral, Photoshop, Canva, WordPress

UX/UI Designer (Freelance) — Logistics startup (US)

Dec 2023 – Mar 2024

Logistics app for US truck drivers — iOS, Android & web · Worked directly with the product manager

- Redesigned driver flows that confused users after launch: accepting orders, confirming pickup and loading, uploading documents.
- Improved the UI of the live product across iOS, Android and web, prioritizing fixes with the product manager.

Tools & methods: Figma, UX audit, usability improvements, mobile design, responsive web design, developer handoff

EDUCATION

Civil Engineering (3 of 4 years completed) — Belarusian State University of Transport, 2018 – 2021.

COURSES & CERTIFICATIONS

- UX/UI Design — TeachMeSkills, Minsk, 2021
